

MAKE A BILL (press F2)

1. Search the medicine (press **F3**) and click it to add to the bill.
2. Set the **Qty**. Add more medicines the same way. Add a discount if needed.
3. Choose the customer - pick from the list, or type **phone / ID** and Fetch. (Leave as Walk-in if none.)
4. Pick payment: **Cash / UPI / Card / Credit**.
5. Click **Save & bill**, then **Print / PDF**. Click **New bill** for the next customer.

Loose tablets

Customer wants a few tablets, not a full strip?
On that line, switch **Pack -> Loose** and type the **number of tablets**. Price becomes per-tablet; the rest of the strip stays in stock.

Scheduled drugs (H / H1 / X)

A yellow box appears. Enter **Patient name** and **Doctor name** before saving - this builds the legal H1 register automatically.

Shortcuts

F2 Go to Billing
F3 Jump to medicine search
Enter (in fetch box) look up customer

End of day

Billing -> **Day close - cash recon**.
Match **Cash in drawer** against the physical cash. See the split by Cash/UPI/Card/Credit.

Alerts

The **Bell** (top-right) shows **low stock**, **out of stock**, and **near-expiry** items. A red number means action is needed.

Give bills to the accountant

Billing -> **Download bills -> This month -> Download Excel**. Two sheets: a bill summary and full item detail.

The system always sells the **earliest-expiring batch** first. Sign in: **admin** (change the password in Settings after go-live). Everything works offline - no internet needed.
