PharmaDesk

OPERATING MANUAL

Pharmacy Inventory, Billing & Supply-Chain Software

Issued: 25 June 2026
Keep this manual at the counter.

For: Counter staff and the pharmacy owner

System: PharmaDesk - Pharmacy Inventory, Billing & Supply-Chain Software

Runs: On your counter PC. No internet needed.

Contents

- 1 Getting started - opening the app & signing in
- 2 The screen layout
- 3 Billing - making a sale
- 4 Selling loose tablets
- 5 Scheduled drugs & prescriptions
- 6 Customers
- 7 End of day - cash reconciliation
- 8 Inventory - medicines, batches & prices
- 9 Stock adjustments
- 10 Suppliers
- 11 Purchase orders & receiving stock
- 12 Alerts & notifications
- 13 Reports & downloads
- 14 Settings
- 15 Backups & safety
- 16 Keyboard shortcuts
- 17 Common questions

1. Getting started

- 1 **Switch on the counter PC.** PharmaDesk opens by itself (a desktop window). If it doesn't, double-click the **PharmaDesk** icon.
- 2 **Sign in.** Type the username and password and click **Sign in**.
 - First-time login: **Username** admin, **Password** pharmadesk.
 - **Change this password** after the first day (see Settings).
- 3 You'll land on the **Dashboard**.

Everything runs on this one computer. You do **not** need internet to bill, look up stock, or print.

2. The screen layout

- **Left sidebar** - the main menu: Dashboard, Billing, Inventory, Purchase Orders, Suppliers, Customers, Reports, Settings.
- **Top bar** -
 - Bell - **Bell** (right side): your alerts (low stock, near expiry). A red number means items need attention.
 - Profile - **Round icon** (far right): your shop details and the **Sign out** button.

- **Main area** - whatever screen you've opened.

3. Billing - making a sale

Open **Billing** (or press **F2** from anywhere).

- 1 **Find the medicine.** Click the search box (or press **F3**) and type the medicine name, composition, or scan the barcode.
- 2 **Add it.** Click the medicine in the list - it drops into the bill.
- 3 **Set the quantity** in the **Qty** box. Add more medicines the same way.
- 4 **(Optional) Discount.** Type a per-item discount in the **Disc** box, or a whole-bill discount on the right.
- 5 **(Optional) Choose the customer** - see Customers.
- 6 **Pick payment mode** - Cash, UPI, Card, or Credit (khata).
- 7 Check the **Total** on the right, then click **Save & bill**.
- 8 On the confirmation screen, click **Print / PDF** to print the receipt.
- 9 Click **New bill** to start the next customer.

Which batch is sold? The system **automatically picks the earliest-expiring batch** (so older stock goes out first). You don't choose batches manually.

4. Selling loose tablets

If a medicine is sold in strips (e.g. a strip of 10) and a customer wants just a few tablets:

- 1 Add the medicine to the bill as usual.
- 2 Under the medicine name you'll see a small **Pack | Loose** switch - click **Loose**.
- 3 Now type the **number of tablets** in the Qty box (e.g. 3).
- 4 The price changes to **per-tablet** automatically (strip price ÷ tablets per strip).

The system opens one strip, sells the loose tablets, and ****keeps the rest of that strip**** in stock for the next customer.

Loose selling only appears for items set up with "units per pack" greater than 1 (tablets/capsules). Syrups and bottles are always sold whole.

5. Scheduled drugs & prescriptions

When you add a **Schedule H, H1, or X** medicine to a bill, a yellow

"Prescription required" box appears. You must fill in:

- **Patient name**
- **Prescriber (doctor) name**
- **Registration no.** (optional)

The bill won't save until these are filled. This automatically builds your

Schedule H1 register (available under Reports), so you have the legal record.

6. Customers

You can bill a walk-in customer (the default) or link the sale to a saved customer.

To attach a customer to a bill:

- Pick them from the **Customer** dropdown, **or**
- Type their **phone number or customer ID** in the "Fetch by" box and click **Fetch**.

To add a new customer - open **Customers** -> **Add customer**:

- Name, Phone (numbers only).
- Tick **Regular customer** for repeat buyers.
- Tick **Allow credit / khata** to let them buy on credit; their outstanding

balance then shows on the Customers list and on the Dashboard.

- Tick **Consent given** (for storing their details).
- Tick **Holds a medical supply licence** for clinics/institutions, and enter the licence number.

Credit (khata) sales: choose **Credit** as the payment mode at billing. Their

balance goes up. (Recording repayments is done by your owner/advisor's process.)

7. End of day - cash reconciliation

At closing time, open **Billing** -> **"Day close · cash recon"**.

You'll see today's totals:

- Number of bills and gross sales.
- **Cash in drawer** - match this against the physical cash.
- Sales split by Cash / UPI / Card / Credit.
- GST collected, and any returned bills.

Use this to count and reconcile the cash drawer.

8. Inventory

Open **Inventory**. You'll see every medicine with its stock and status

(In stock / Low stock / Out of stock).

Add a medicine

Add medicine -> fill in:

- **Name**, generic/composition, manufacturer.
- **Type** (Tablet, Syrup, Injection, etc.).
- **GST rate** and **HSN code**.
- **Schedule** (OTC / H / H1 / X) - click **Schedule guide** if unsure what these mean.
- **Pack / unit** (e.g. "Strip of 10") and **Units per pack** (e.g. 10 to allow loose tablet sales; 1 for syrups).
- **Reorder level** and **reorder qty** (when stock drops to the reorder level you get a low-stock alert).
- **Rack location**, barcode, preferred supplier (optional).

Edit a medicine

Click **Edit** on its row, change anything, **Save changes**.

Add stock (batches) and set prices

Click **Batches** on a medicine:

- The list shows each batch with its **Cost** and **MRP/price** - edit these boxes and click the green tick to update a price.
- To add new stock use **Add / receive batch**: enter **Batch number**, **Expiry date**, **Mfg date**, **Quantity**, **Purchase cost**, **MRP**.
- You **cannot** add stock with an expiry date in the past - the system blocks it.

Where do prices come from? Each batch carries its own **MRP** (because different lots can have different printed MRPs). Billing always uses the price of the batch being sold.

Retiring a medicine

Open **Edit** -> bottom section:

- **Discontinue** - hides the medicine from billing but keeps all its history. Use this for products you've stopped stocking. You can **Reactivate** later.
- **Delete permanently** - only works for an item that has **never** been sold/ordered (e.g. added by mistake). If it has history, the system stops you and asks you to discontinue instead.

9. Stock adjustments

To record damage, expiry write-off, or a stock count correction:

- 1 **Inventory** -> **Batches** on the medicine -> **Adjust stock** tab.
- 2 Pick the batch, choose a reason (Damage / Expiry / Count correction), enter the quantity (use a minus sign to reduce, e.g. -5), add a note, **Post**.
- 3 Recent adjustments are listed below with a **Reverse** button if you made a mistake.

10. Suppliers

Open **Suppliers** -> **Add supplier** (or **Edit**):

- Supplier **code**, name, GSTIN, contact, phone, email, address.
- **Payment term** and **Lead time** - chosen from lists you manage in Settings.
- Tick **Holds a medical supply licence** and enter the licence number.

11. Purchase orders & receiving stock

Open **Purchase Orders**.

Create an order

- 1 Click **Suggest reorder** - the system lists items at or below their reorder level, grouped by supplier.
- 2 **Adjust the strip/pack quantity and unit cost** for each item as needed.
- 3 Click **Create draft PO**.

Send it to the agency

- Open the PO. You can still **edit quantities** while it's a draft.
- Click **PDF** to get a printable purchase order (with your logo, GST, and HSN) to send to the distributor.
- Click **Place order** to mark it as sent.

Receive the goods

When stock arrives, open the PO -> **Receive goods**, and for each item enter:

- **Batch no, Mfg date, Expiry date** (required), **Qty, Cost/unit, MRP**.
- Click **Confirm receipt** - stock is added automatically and the PO is marked received (or partially received).

12. Alerts & notifications

Click the Bell - **bell** (top right) anytime. It refreshes by itself and shows:

- **Low stock** - at or below the reorder level.
- **Out of stock** - a normally-stocked item at zero.
- **Near expiry** - batches expiring within your warning window (default 90 days).

Click an alert to jump to Inventory, or **x** to dismiss it. The Dashboard shows the same alerts in its "Alerts & reorder" panel.

13. Reports & downloads

Open **Reports**. Available reports:

- **Stock & Valuation** - what you hold and its value.
- **Low / Out-of-Stock**.
- **Near-Expiry**.
- **Sales** (by date range).
- **Bills (detailed)** - every bill with its items.
- **GST Summary** (by date range).
- **Schedule H1 Register** - the legal record of scheduled-drug sales.

Each report can be **exported to Excel or PDF** (buttons top-right). Reports with dates have **From / To** pickers.

Quick bills download: on the **Billing** screen, click **Download bills** ->

pick ***Today*** or ***This month*** -> **Download Excel**. You get a two-sheet workbook: a per-bill summary and the full line-item detail.

14. Settings

Open **Settings** (bottom of the sidebar). Owner tasks:

- **Shop & licence** - shop name, GSTIN, drug licence number, address, phone, and **logo** (shown on the purchase order). Tick whether the shop holds a drug licence.
- **Document numbering** - invoice prefix, PO prefix, and the next PO number.
- **Operational defaults** - near-expiry warning window (days), default reorder level/qty.
- **Masters** - manage the **Payment terms** and **Lead times** lists used for suppliers.
- **Login password** - change the sign-in password. **Do this after go-live.**

Click **Save settings** after editing the shop details.

15. Backups & safety

- The system makes a **backup of all your data every day** automatically, and one each time the app starts.
- Backups are kept on the PC, and (if set up) copied to an external drive or cloud folder for safety.
- **Don't switch off the PC at the wall during a sale.** Close the window normally.
- If anything ever goes wrong with the data, your installer can **restore** the most recent backup - at most one day's data is ever at risk.

Ask your installer to confirm an **off-machine backup folder** is set, so a PC failure or theft can never lose your records.

16. Keyboard shortcuts

Key	Does
F2	Jump to Billing from anywhere
F3	Put the cursor in the medicine search box (on Billing)
Enter	(in the customer fetch box) look up the customer

17. Common questions

Do I need internet?

No. Everything works offline on the counter PC.

Which batch gets sold?

Always the earliest-expiring one in stock (first-expiry-first-out). Automatic.

A customer wants 3 tablets, not a full strip.

Add the medicine, switch the line to **Loose**, type 3. See Section 4.

The system won't let me bill a medicine.

Either it's out of (non-expired) stock, or it's a scheduled drug needing prescription details. Read the message on screen.

I can't delete a medicine.

If it has sales/order history, the law needs those records kept - **Discontinue** it instead (it disappears from billing but the history stays).

I entered a wrong stock adjustment.

Inventory -> Batches -> Adjust stock tab -> **Reverse** the entry.

How do I see today's sales?

Dashboard ("Today's sales" card) or Billing -> **Day close**.

How do I give the accountant the bills?

Billing -> **Download bills** -> This month -> **Download Excel**. Or Reports ->

Bills (detailed) / GST Summary.
